Work Experience

Data Scientist II

Agile Lab — Sep 2025 – Present

Conducting AI agent development and graph-based geospatial analysis.

Machine Learning Engineer — Senior Consultant

Links M&T — Jan 2025 – Aug 2025

- Built a multi-tenant IoT energy forecasting platform for 3 enterprise clients with genetic algorithm-optimized models, real-time dashboards, and **MLOps** (experiment tracking, model registry, versioned datasets, CI/CD, rollback); enabled per-tenant customization and reduced peak energy costs, overall consumption, and CO₂ emissions via demand forecasting.

Machine Learning Engineer — Consultant

Links M&T — Mar 2023 – Dec 2024

- Integrated browsing, crawling, and **GraphRAG** into a ReAct agent-powered **chatbot** to unify on-premise and online sources, accelerating reporting and reducing preparation time by 15–30 minutes per session.
- Designed an **ESG reporting** solution underpinned by RAG and GPT-4o for automated KPI extraction and contextual retrieval from fund reports, reducing compliance costs and improving decision-making efficiency.
- Developed an NLP web application powered by **encoder-only** transformer models for contextual content recommendations with sub-5s latency, including speech-to-text and text-to-speech.
- Engineered **predictive maintenance** and remaining useful life estimation for EV charging stations, reducing maintenance costs by 30% and preventing unexpected failures via degradation models.
- Built a loan **default prediction** model achieving 80% accuracy with <2% false positives, enabling proactive flagging of high-risk accounts 3–6 months before potential delays.
- Lecturer** in software development, databases, and Python at *Associazione Formazione*, and in anomaly detection and time series analysis at *Links Academy – AI & ML*, resulting in 7+ student job placements; practical lab materials on *GitHub*.

Artificial Intelligence and Data — Analyst

Deloitte — Oct 2022 – Feb 2023

- Developed an **ETL** workflow with automated visualization of employee KPIs from survey data, transforming static reports into real-time dashboards that enhanced engagement, retention, and satisfaction monitoring for leadership decisions.

AI Engineer and System Administrator — Intern

Intesa Sanpaolo — Dec 2021 – May 2022

- Implemented real-time **time series forecasting** and anomaly detection, evolving from statistical baselines to recurrent networks and autoencoders, reducing infrastructure failure response time from minutes to seconds.

Education

Master's Degree in Computer Science — AI

GPA: 3.71/4 Jan 2020 – Apr 2022

University of Turin

- Coursework: Neural Networks; **Machine Learning**; Natural Language Technologies; Advanced Software Architectures.
- 200h collabs: web pages development for freshman orientation; study support for a student with disability.
- Thesis: real-time time series **anomaly detection** using stats, machine learning, and deep learning (*thesis link*).

Bachelor's Degree in Computer Science

GPA: 4/4 Oct 2016 – Dec 2019

University of Bari

- Coursework: Computer Architecture; Operating Systems; **Algorithms**; Databases; Software Engineering.
- Thesis: full-stack development of an indoor positioning system integrating a content-based **recommender system**.

Skills

Programming: Python, Java, SQL, Bash

ML/AI: TensorFlow, Keras, PyTorch, scikit-learn, RAG, ReAct agents, LangChain, LangGraph, Transformers

Data & Analytics: Pandas, MS Excel, Qlik Sense, Qlik NPrinting

Databases: PostgreSQL, MongoDB, Redis, Milvus

Cloud & DevOps: AWS (EC2, S3, Lambda, SageMaker, Transcribe, Polly, SQS, SNS, RDS, EventBridge), GCP, Docker, Kubernetes, Git, GitLab CI/CD

Frameworks & Tools: FastAPI, Spring Boot, Flask, Bokeh, Keycloak

Certifications

AWS Certified Machine Learning

Apr 2024

Credentials: [Credly profile](#)

Courses: *AWS ML Certification Preparation (Mar 2024)*, *GCP Big Data and ML Fundamentals (May 2022)*, *GCP Fundamentals: Core Infrastructure (Apr 2022)*

Languages

Italian: Native | English: Professional Working Proficiency
